

GoNetZero™: Helping Corporates Accelerate Decarbonisation through Collaboration

Through EDB's CVL programme, GoNetZero™ unlocked growth opportunities within six months of its launch, securing mutually beneficial partnerships with industry leaders and renewable energy (RE) generators.

OCBC: Helping Corporates of All Sizes Decarbonise

- OCBC partnered GoNetZero™ to help businesses deploy and adopt solar energy by providing access to RECs-backed energy generation with zero capital expenditure.
- OCBC connects businesses with solar generators and facilitates the signing of power purchase agreements for planned solar installations.
- GoNetZero™ then aggregates the RECs generated across these assets, creating additional revenue streams for the new asset owners by facilitating REC sales to corporations aiming to achieve their decarbonisation goals.

Razer: Empowering Consumers to be Part of the RE Transition

- GoNetZero™ and Razer's FinTech arm collaborated to launch sustainability service, Restorify, which provides a carbon neutral checkout solution through fractionalised carbon credits.
- It allows merchants to calculate their products' carbon footprint and lets consumers contribute by offsetting emissions immediately during checkout.
- A certificate detailing the amount of emissions that have been offset is provided at the point of purchase.

Instituto Totum: Expanding Global Market Access to RECs

- GoNetZero™ works with Brazil's International Renewable Energy Certificate (I-REC) issuer, Instituto Totum to help RE generators market at speed to businesses.
- Brazil RE generators can now seamlessly and speedily list their I-RECs for sale on the GoNetZero™ platform, tapping on a global network of corporate buyers.
- Corporates also benefit from a variety of choice in a more efficient RECs market.
